AIMPOINT'S ACRO C-2 2.5 MOA RDS AND B&T QD Mount

AIMPOINT'S ACRO C-2 2.5 MOA RDS AND B&T QD Mount

By: Sal Palma

Aimpoint, a Swedish company founded in 1974, is synonymous with the red dot sight. Their revolutionary invention has fundamentally changed the way we aim firearms, particularly in military and law enforcement applications. The development of the red dot sight has had a profound impact on modern warfare. It has enabled soldiers to engage targets more quickly and accurately, particularly in urban combat environments.

Additionally, the reliability and durability of Aimpoint's sights have made them a trusted choice for military and law enforcement personnel worldwide. A tradition that continues in the ACRO C-2.

The Aimpoint ACRO C-2, a 2.5 MOA red dot sight unveiled on October 7, 2024, is a game-changer. Aimpoint has again outdone themselves with their innovative approach to packaging the carbine variant with your choice of Reptilia®, Scalarworks®, or B&T® mounts. In doing so they add value and catered to a wide range of user preferences. This review will explore the capabilities of the ACRO C-2, paired with the versatile B&T® 39mm Mount.

As an ardent fan of Aimpoint optics, I have always admired their ruggedness, reliability, and optical clarity. When Aimpoint introduced the ACRO C-2, a red dot sight specifically designed for carbine applications, my interest was piqued, and after extensive range time, I can confidently say that the ACRO C-2 lives up to the Aimpoint legacy, offering a compelling blend of features, performance, and durability.

The Aimpoint ACRO C-2 is a compact, robust, and versatile red dot sight designed for a wide range of applications, from pistols and rifles to shotguns, and like its successor, the original ACRO, the ACRO C-2 builds on its strengths and addresses some of its limitations.

The ACRO C-2 is light and compact presenting a low profile, but do not be misled by its

compactness, the C-2 is built to take anything you throw at it.

With a battery installed and mounted on the B&T mount, the ACRO C-2 weighs only 4.8 ounces. The sight and mount package measures 2.29 inches overall and two inches to the center of the aperture, and seamlessly integrates with most setups without requiring adjustments to stock height or cheek weld.

The C-2 delivers exceptional optical performance with a clear image and a precise 2.5 MOA red dot. Its parallax-free design ensures accurate aiming at any distance.

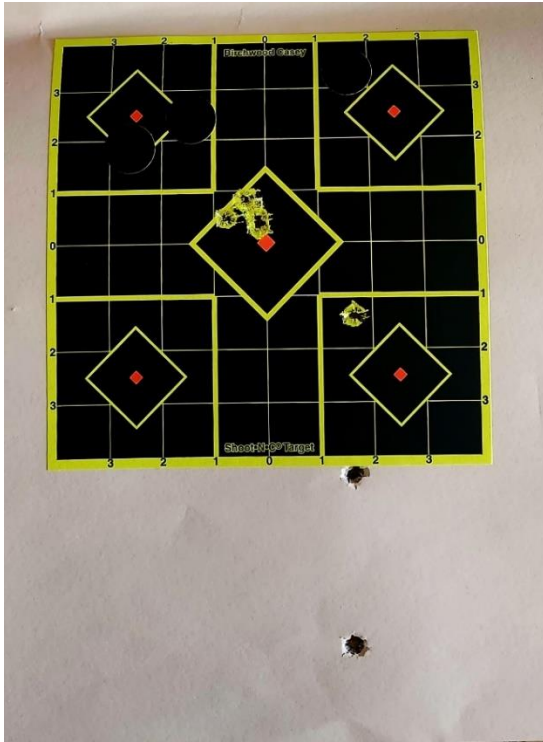

The inclusion of flip-up lens covers is a nice touch that provides added protection and convenience.

The ACRO C-2 is a model of simplicity. Its clear clearly labeled controls and bright intuitive dot make it incredibly user-friendly. With 6 daylight and 4 night vision brightness settings, the C-2 delivers superior performance under the most challenging lighting conditions.

At the range the C-2 performed superbly. Wind and elevation adjustments provide excellent audible and tactile feedback contributing to the sight's ease of use and promoting shooter confidence.

The key takeaway from the image above is not the impressive 3-shot group at 25 yards. My focus is on the precise vertical movement of the point of impact as I zeroed the sight. This demonstrates the lack of wind influence on elevation adjustments.

The Aimpoint ACRO C-2 is a testament to the brand's reputation for ruggedness and reliability. Its closed emitter design safeguards vital components, while its anodized aluminum housing ensures durability in extreme conditions. Built to withstand recoil and harsh environments, the C-2 delivers consistent performance you can count on.

Powered by a standard CR2032 battery, the ACRO C2 offers an impressive 50,000 hours of battery life at a dot brightness setting of 6. This means extended use without the hassle of frequent battery changes, and battery replacement can be done without removing the sight.

In closing, the ACRO C-2 delivers exceptional performance in a variety of shooting scenarios. The dot remains clear and consistent across all brightness settings, making it easy to use in both bright sunlight and low-light conditions. The sight is also incredibly reliable, withstanding recoil and harsh environmental conditions without any issues. Mounting Options and Versatility

Aimpoint offers the ACRO C-2 with various mounting solutions, including the popular Scalarworks 1.57" mount. This allows for easy integration with a wide range of carbines and rifles. The low-profile design of the sight and mount minimizes the overall height of the optic, improving cheek weld and reducing the risk of snagging on gear.

The Aimpoint ACRO C-2 is a fantastic red dot sight that sets a new standard for carbine optics. Its compact design, rugged construction, and exceptional performance make it a top choice for anyone seeking a reliable and versatile optic. While it may not have the same iconic status as the T-1 or T-2, the ACRO C-2 is a worthy addition to the Aimpoint lineup and a compelling option for any serious shooter, professional or sport.
