XS Sights Optic Plates and OR-Height Sight Bundle for Your GLOCK MOS Pistols

By: Sal Palma

RITON OPTICS 3 Tactix EED

There's little doubt that red dot sights on pistols are here to stay, and over the past few years the industry has seen pistol manufacturers produce milled slides to accommodate a red dot sight along with its appropriate mounting plate.

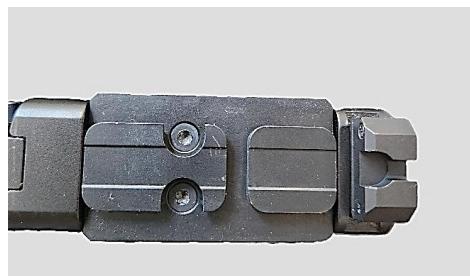

Glock introduced the Modular Optic System (MOS) in 2016, with the first MOS-equipped pistols being Gen4 models. Specifically, the MOS system was developed to simplify the mounting of red dot sights without requiring costly slide milling or custom gunsmithing.

Jumping into the world of red dot sights for your GLOCK MOS pistol, if you are looking to enhance your aiming precision and speed, mounting a red dot optic on your GLOCK is a game-changer. However, the Modular Optic System (MOS) on your GLOCK is just the first step. To attach your chosen optic securely and correctly, you need

the right mounting plate, and that's where XS Sights step in with their thoughtfully engineered Optic Plates and the accompanying OR-Height Sight Bundle.

This past March, XS Sights introduced their new Optic Plates and OR-Height Sight Bundle for Glock MOS pistols. Addressing the growing demand for pistol red dots, this system offers Glock owners a simple and dependable method for mounting optics while ensuring reliable backup iron sights with a proper co-witness. The optic plate installs easily, and the rear sight is also straightforward to mount using XS Sight's Glock sight pusher. This review will cover the MOS / ACRO plate paired with blacked-out OR-height front and rear sights.

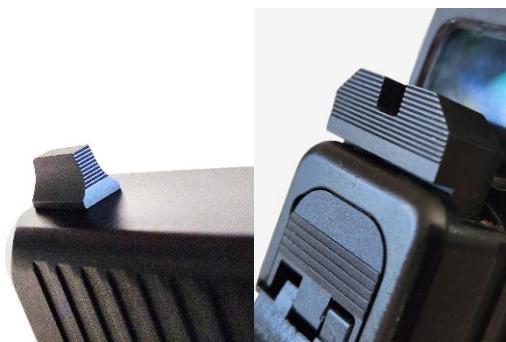

In looking at the top view of the mounting plate you will notice that it is wider, by a small amount, than the slide. This is a design choice to accommodate slightly wider slides like that of the Glock 21 Gen 5 MOS or slightly wider sight bodies. The ACRO plate is currently available for Glock MOS Models: 17, 19, 34, 45, 47, & 49

In case you were wondering, the "OR" stands for Optic Ready, and they are specifically designed to provide a clear sight picture through the window of your red dot, typically in the lower third of the view.

This co-witnessing capability offers several crucial advantages. Firstly, in the unlikely event of your red dot failing, you have a readily available set of iron sights to fall back on, ensuring you remain in the fight or can complete your range session. Secondly, for some shooters, seeing the iron sights in conjunction with the red dot can aid in the initial acquisition of the dot, especially under stress.

The XS Sights OR-Height Sight Bundle includes a taller front sight, and a matching rear sight designed to achieve an optimal co-witness. The rear sight features blacked-out serrations to minimize glare, and the front sight is available in two variations, users can choose between a standard blacked-out front or a front sight with a tritium dot.

These sights are engineered for rapid target acquisition in all lighting conditions, further enhancing the overall effectiveness of your optic-equipped GLOCK.

The XS Sights Optic Plates and OR-Height Sight Bundle for GLOCK MOS pistols provide a comprehensive solution for securely mounting your red dot and ensuring you have reliable backup iron sights.

By choosing XS Sights, you are investing in quality, precision, and the peace of mind that comes with knowing your optic is mounted correctly and your backup sights are ready if needed. This combination allows you to fully leverage the advantages of a red dot sight on your GLOCK, improving your speed, accuracy, and overall shooting performance.

Product Features

- Ready-made sight and plate combo — eliminates guess work and math.
- 30% more thread engagement — helps prevent optic failure.
- BlackNitride surface treatment — enhanced corrosion resistance
- Low co-witness — low enough to avoid distractions in optic window.
- Additional recoil lug — stabilizes optic and reduces force on screws.
- Tritium or non-tritium front sight — optional low light visibility
- Blacked out serrated rear — reduces glare and distractions.
- CNC machined steel — durable and American made.
- Glock MOS compatible fits RMR footprint optics.
- Kit includes Optic plate, blue threadlocker, screws, torx bit, front sight, rear sight, and red threadlocker
