## Streamlight PROTAC 2.0 Ducks Unlimited Edition Headlamp

By: Sal Palma

If you evaluate the Streamlight ProTac 2.0 Ducks Unlimited (DU) Edition purely on its raw internal engineering, you might wonder why it warrants a distinct release.

Internally, it is identical to the standard ProTac 2.0. It pumps out a blinding 2,000 lumens on High, features Streamlight's TEN-TAP programming, and relies on the massive 4,900 mAh SL-B50 USB-C rechargeable battery pack. However, field gear is about application. Streamlight did not need to rebuild the engine; instead, they tuned the

package specifically for hunters, outdoorsmen, and conservation supporters.

What Sets the DU Edition Apart?

Desert Tan Anodizing and a custom head band replacing the standard matte black finish. The hard-anodized Desert Tan body matches field camouflage and breaks up contrast in the blind.

It comes fitted with an adjustable co-branded Ducks Unlimited elastic head strap, and the Game Spotter® Green Filter

This is the most practical functional upgrade. Green light aids contrast when navigating

dense woods or tracking trails, it doesn't spook wildlife as severely as bright white light and preserves your eye's dark adaptation. When you purchase this exceptional headlamp, a portion of each sale directly supports Ducks Unlimited's wetlands conservation projects, and the light includes a free 6-month DU trial membership.

### Performance Specs Breakdown

| Mode   | Output                         | Beam Distance | Runtime    |
|--------|--------------------------------|---------------|------------|
| High   | 2,000 lumens<br>14,500 candela | 241 meters    | 2.25 hours |
| Medium | 650 lumens<br>4,200 candela    | 130 meters    | 4.5 hours  |
| Low    | 110 lumens<br>750 candela      | 55 meters     | 25 hours   |

The ProTac 2.0 is a heavy-duty (10.48 oz) piece of hardware. This is not a lightweight trail-running headlamp; it is built like a tank from 6000-series aircraft aluminum.

The top strap on the DU band is essential, distributing the weight evenly across your head or over a heavy duck-hunting

cap so it won't bounce when navigating mud and marsh.

The IP64 dust/water resistance and 2-meter impact rating mean it handles submersion in splash zones, downpours, and drops onto boat decks without missing a beat.

A key design highlight is the sliding sleeve that covers the USB-C charging port. Unlike rubber port covers that pull off or trap dirt, the sliding aluminum sleeve creates a tight seal against marsh mud and moisture.

Blasting 2,000 lumens out of a headlamp is game-changing when running a boat down a dark pond predawn or scanning timber. However, in close quarters, 2,000 lumens will blind you and your hunting partners.

Snapping on the included Game Spotter® green filter and toggling the light down to Low (110 lumens) via the TEN-TAP button gives you the ideal setup for setting decoys, rigging lines, or reading maps without ruining your night vision or alerting game.

The Streamlight ProTac 2.0 Ducks Unlimited Edition takes an already proven, ultra-bright illumination tool and tailors it for the marsh. PROTAC 2.0 (DU) is a powerful addition to your gear. Buy it if you are a waterfowler or big-game hunter who needs serious hands-free output, field-ready green filtration out of the box, and want your purchase to support wetlands habitat conservation.
